

Results of April 2022

The major coins had a bad month. Both BTC and ETH went down around 17%.

Most bots did something similar and the opportunistic bots went down even more. That's because these bots are prepared to take some risk not to miss the rise of the market. But there was no rise.

As soon as the market will really go up, these bots will make great profits, as you can see in the backend testing results of the teasers. However, nobody knows when the market will go up again.

On the other hand you have the careful bots. They were able to make profits or keep the losses to a minimum. In bad times, these bots are your best choice.

Note that most careful bots are not live yet. I have asked Bots.io to put them live asap.

1) Profits are based on USDT, which is the base-asset for every bot.

2) The month starts at 2am of the 1st day of the month and ends at 2am of the 1st day of the next month.

3) Most bots invest 100% in an asset, but some bots (like Hypnos) invests 10% in one asset, 10% in another and keeps (for example) 80% in USDT. A '10%' transaction is counted as 0.1 transaction.

4) Transaction costs are included in the results (obviously). These costs are 0.25% (0.2% transaction-fee + 0.05% spread). The 0.05% is an estimate that may differ from the actual spread (usually the spread is lower in reality). The estimate may explain differences between our numbers and Bots.io's numbers.
