

Results of May 2022

May was the month of the crash of Terra (LUNA) and TerraUSD (UST). None of our bots do something with Terra or TerraUSD. However, also the other coins went down because of the crash: BTC -15.45%, and ETH -28.77%.

Most of our bots could limit the damage, a few did not, and a few made a nice profit anyway. Interesting to mention that our most defensive bot Gaia made a move. She bought BTC and sold it a few days later, making a small profit of 0.04% (this is after deducting 0.25% transaction costs).

If you want to know more details and want to find out where the profit of Nemesis comes from, please check out the website teamkronos.io. There you can do a day-to-day analysis of our bots, and compare them to other bots and coins.

- 1) Profits are based on USDT, which is the base-asset for every bot.
- 2) The month starts at 2am of the 1st day of the month and ends at 2am of the 1st day of the next month.
- 3) Most bots invest 100% in an asset, but some bots (like Hypnos) invests 10% in one asset, 10% in another and keeps (for example) 80% in USDT. A '10%' transaction is counted as 0.1 transaction.
- 4) Transaction costs are included in the results (obviously). These costs are 0.25% (0.2% transaction-fee + 0.05% spread). The 0.05% is an estimate that may differ from the actual spread (usually the spread is lower in reality). The estimate may explain differences between our numbers and Bots.io's numbers.
