

Results of October 2022

BTC went up a little, ETH went up a lot (18.06%). However, most of the time the market was very static, non-volatile. Compared to a year ago, the market is very static.

In such a market it is hard to make a series of moves to beat the benchmark. That's why most bots do not make many moves or do not trade at all. If they make a move, there's a chance they do not beat the benchmark (although most bots do make some profit).

Balbinus, Epaphus and Seleucus were able to beat the benchmark.

All the details (including this report) can be found at teamkronos.io.

1) Profits are based on USDT, which is the base-asset for every bot.

2) The month starts at 2am of the 1st day of the month and ends at 2am of the 1st day of the next month.

3) Most bots invest 100% in an asset, but some bots (like Hypnos) invests 10% in one asset, 10% in another and keeps (for example) 80% in USDT. A '10%' transaction is counted as 0.1 transaction.

4) Transaction costs are included in the results (obviously). These costs are 0.25% (0.2% transaction-fee + 0.05% spread). The 0.05% is an estimate that may differ from the actual spread (usually the spread is lower in reality). The

estimate may explain differences between our numbers and Bots.io's numbers.
