

## Results of November 2022

And then there was the crash of FTX, one of the largest cryptocurrency exchanges, and before the incident, one of the most trusted. It had an immediate effect on the value of FTT, because the added value of FTT is receiving discount fees on the FTX platform. The value of FTT vaporized in a few hours.

Unfortunately quite some bots were impacted by it, because they had a (partial) position in FTT. As historical analysis shows that panic sells are (almost) never good, this was clearly the exception to the rule. The result you can see below. Nemesis was hit hardest. The bots that were not in FTT, showed good results though.

- 1) Profits are based on USDT, which is the base-asset for every bot.
- 2) The month starts at 2am of the 1st day of the month and ends at 2am of the 1st day of the next month.
- 3) Most bots invest 100% in an asset, but some bots (like Hypnos) invests 10% in one asset, 10% in another and keeps (for example) 80% in USDT. A '10%' transaction is counted as 0.1 transaction.
- 4) Transaction costs are included in the results (obviously). These costs are 0.25% (0.2% transaction-fee + 0.05% spread). The 0.05% is an estimate that may differ from the actual spread (usually the spread is lower in reality). The estimate may explain differences between our numbers and Bots.io's numbers.
